Signal takes on Cellebrite UFED

Exploiting vulnerabilities in Cellebrite UFED and Physical Analyzer from an app's perspective

reposted on 04 Apr 2022

Cellebrite mobile software is marketed physically extracting and indexing data from mobile devices. They exist within the grey – where enterprise branding joins together with the infamous to be called "targeted intelligence". Their customer list has included authoritarian regimes in Belarus, Russia, Venezuela, and China; death squads in Bangladesh; military juntas in Myanmar; and those seeking to abuse and oppress in

The whole thing is amazing to read through, but I just love the tongue-in-cheek finale.

Keyboard Conscience – Dilbert by Scott Adams

HELLO, HUMAN. I'M YOUR KEYBOARD'S CONSCIENCE. YOU SHOULD RECONSIDER SENDING SUCH A MEAN EMAIL.

WORKING REMOTELY HAS CAUSED YOU TO DEVOLVE INTO AN EMPATHY-FREE MONSTER WHO CARES NOTHING FOR THE FEELINGS OF OTHERS.

NOW YOU'RE JUST BEING A JERK.

Enable Mastodon Apps

By Alex Kirk

Details

Reviews

Development

Support

Download

Description

Despite Mastodon implying that you would use this plugin for engaging on Mastodon (when you have enabled it for that, see below), the plugin is useful when installed on a plain WordPress.

When you use a Mastodon app, you'll enter your own blog URL to connect and log in to your blog in the following screens.

You'll then see just the posts on your blog which can already be useful in a multi-author environment (e.g. private blogs). You can also use that Mastodon app to create simple posts with a message + attachment(s) which can be better suited for your usecase than using the Gutenberg-capable WordPress mobile app.

When used in combination with the [ActivityPub](#) (for being followed via Mastodon) and [Friends](#) (for following people on Mastodon or via RSS) plugins, the Enable Mastodon Apps plugin will show you your feed of people you follow and you can follow and unfollow people from within
